

# **KAFA ZONE DEPARTMENT OF WATER, MINE AND ENERGY**

## **Terminal Report on Energy Saving Stove Production and Distribution**

**Submitted to: Nature and Biodiversity Union, NABU**

**April 2013**

**Bonga, SNNPR**

**Ethiopia**

## **1. Introduction**

Kafa zone department of water, energy and mines department is responsible for the implementation and supervision of zonal level water development, supply and distribution; energy supply and technology development and mine related matters as well. By virtue of this mandate vested on the department, it has been playing the coordination and monitoring of the above activities. Based on this mandate our department has engaged into contractual agreement for the production and distribution of 10,000 energy saving mirt stoves with NABU implemented project entitled “Climate protection and preservation of primary forest- a management model using coffee forests in Ethiopia with a financial support of 120,000Euro.

The project has been operational since from the 4<sup>th</sup> of February 2011 to 30<sup>th</sup> October 2012. From the commencing date on the department of kaffa zone water mines and energy has been operational in the production and dissemination of energy saving mirt stove in kaffa zone within Kafa Coffee Biosphere Reserve for target beneficiaries.

The ultimate target of the agreement is the production and distribution of 10,000 energy saving stoves to be used by the inhabitants of the biosphere reserve whereby reduced wood consumption and carbondioxide emission at least by 50 percent. To achieve this objective and further underpin sustainability to reach as many inhabitants as possible by the factor of replication, numerous interlinked actions have been exerted.

This terminal report explores the process and substantial tasks achieved during the contractual period in line with the original stipulated deliverables and other unplanned success stories as well.

## **2. Background about the problem**

Tropical deforestation is one of the main sources of human origin greenhouse-gas emissions. Various experts are arguing that some decades back, quite large areas of the Ethiopian highlands and lowlands were covered by forests; today, only few pocket areas are left with the remnant forest. If the current deforestation rate continues many scholars also agreed that within the coming few years the remnant will be gone completely. The south west Ethiopian afromontane forests are considered to be an invaluable genetic resource; these forests are both the center and

origin of the genetic diversity of Arabica coffee (*coffea Arabica*). However, as result of the dependence on wood for the local population, and conversion of the forest to arable land, this diversity is being dramatically reduced.

The project's overriding aim is the protection and sustainable use of the remaining afromontane cloud-forests, in order to avoid greenhouse gas emissions and secure to carbon storage capacities, as well as receive allocation of eco-system benefits for the local population and reduce their vulnerability to climate change. Carbon capture and storage will be increased through reforestation and rehabilitation of fragmented forests and downgraded areas.

### **3. Background about the project**

NABU has been operational in Ethiopia for the last 10 years, working with various stakeholders both Governmental and Non-Governmental Organizations. NABU actively involved in the establishment of Kafa Coffee Biosphere Reserve. Since 2005 NABU guided the process of biosphere reserve establishment in the area. Together with its partners such as Kafa coffee farmers union, Kafa zone administration, GIZ, original food, MSW, through the public private partnership, varies activities has been accomplished; particular emphasis could be given to the achievements so far made such as establishment of participatory forest management, improvement of coffee harvesting, and marketing up to connecting the coffee union to regular consumers in Germany and elsewhere in Europe. NABU is still assisting to establishment of information center in Kafa biosphere reserve.

The project which is planned to be implemented in the biosphere reserve is the continuation of NABU's more than 6 years of work in the zone. The Ethiopian government has limitations in the area of finance and technical experience in order to implement some of the main programs of the biosphere reserve required by the UNESCO. As a result of that NABU has secured a fund from the Federal Democratic Government of Germany to bridge the gap in the process of implementation of programs of the UNESCO Biosphere Reserve.

### **4. Planned activities and achievements**

#### **4.1 Training Of Enterprises, Stakeholders And Beneficiaries**

This particular activity comprises multiple aims notably creating long-term production beyond the project period and planned quantity by capacitating local level producers to resume

production above and beyond. On the other hand it aims to contribute to the employment creation for jobless youth living within the biosphere reserve in a manner their actions are complementary to the overall environmental protection. In the project the original plan was to train 100 people. Before implementing the training the department has conducted needs assessment in all the ten woredas and come up with facts that one producing unit seems capable of supplying modest number of stove production as far as long term production and supply is concerned. On the other hand an assessment with the existing enterprise development and promotion offices, a team of five members is identified as the most efficient and also easy for group management. Meanwhile the department has foreseen the essentiality of linking with woreda experts for close and continuous support provision in order to make the objective successful. As a result it was decided to train a total of 70 trainees from all the ten woredas.

Fig 1 Theoretical and practical training of producers

Before effecting the actual training the department had a consultation discussion with relevant institutions such as woreda agriculture development offices, woreda water, mine and energy offices, woreda enterprise development and promotion offices, woreda microfinance institutions and woreda administrations on setting selection criteria. Accordingly, 54 jobless people (31 male and 23 female) and 20 experts (10 from energy and 10 from agriculture) had been given comprehensive and practice oriented training for 5 days. During the training session the trainees produced 70 stoves distributed around Bonga town.

Beside to training producers and coordinating partners, assemblage, installation and proper utilization demonstrational trainings were given to, 11003 direct beneficiaries. The

demonstration has also discussed on the health, economic and all other related aspects of using the technology.

As the distribution is fairly scattered over the biosphere reserve 81 kebeles of the ten woredas, the demonstration is believed to benefit in promoting and familiarizing more people through neighborhood and by-passers information transfer. In summary 70% of producers and more than 110% beneficiaries have got trainings.

#### **4.2 Purchase and supply of production materials for local producers**

This is an activity to capacitate local jobless enrolled in this program to initiate start-up of stove production. Hence the following materials that are important for starting the job notably moulds to precast various parts of the stove, timber for settlement, cement, sand, shed materials, gloves for safety etc had been purchased and supplied during and after the training. Some of the consumable materials and moulds were used during the practical training session. The other materials were distributed to the ten producer groups together with starting capital.

Table 1: Purchase and supply of materials

1	<b>Energy Saving</b>		Physical			Financial (Euro)		
			Planned	Achieved	%	Planned	Utilized	%
1.1	<b>Introduction and dissemination of Energy Saving Mirt Stove</b>					28112	20043.79	103

1.1.2.3	Demonstration utensils	sites	10	10	100	10330	10966	106

#### **4.3 Demonstration of energy saving mirt stoves to beneficiaries**

The demonstration was focused on promotion and induction of energy saving stove in ten rural woredas to beneficiaries in market place as well as individual households. These demonstrations

encompass how it would be durable, assembling different parts of stoves and how to use the stove on leveled place. And also baking of injera is demonstrated on market place of all woredas.

Figure 2 Assemblage demonstrations of different parts of the stove to beneficiaries

#### 4.4 Production of Energy Saving Mirt Stoves

As the key output of the agreement, 11,200 energy saving quality mirt stove (Table 1) was produced by 11 enterprises, and these enterprises produces mirt stoves through the integrated effort of different actors. Among those efforts, monitoring and supervision of the produce's cooperative as well as the product quality control, supporting producers in the procedure of purchasing and supplying raw materials and production processes are the day to day activities through the production. Moreover, efficient financial and labor management of the cooperatives was also an attention to enable the producers better benefited and transformed to good entrepreneur.

Through such routine follow up and support carried out during the production of energy saving mirt stoves. The production and distribution of energy saving mirt was achieved in 10 rural woredas and Bonga city centers. So, the production of energy saving mirt stove step is observed in the following figure. Our performance is evaluated more than 100% accomplishment as compared to the plan of the agreement.

Figure 3 production step of mirt stove

Table 2 Production of energy saving mirt stoves

<b>Sum</b>		<b>10,000</b>	<b>11,200</b>	<b>112</b>	

#### 4.5 Purchasing of energy saving mirt stove

After completing the production of energy saving mirt stoves our department purchased 11, 200 stoves from the local producers. The original plan was to purchase 10,000 stoves. These made our performance 112%. The rationale behind this accomplishment was high demand that is observed from the beneficiaries. Due to this high demand of beneficiaries our department made

extra purchase of stoves by reducing transportation and other activity costs. The total stoves purchased from the local producers were listed in the following table.

Table 3. Stove purchase list by woreda

	<b>Sum</b>	<b>11,200</b>		<b>2,105,000</b>	

#### 4.6 Distribution of Energy Saving Mirt Stoves to beneficiaries

The production and handover of the stoves described above is followed by distribution to the beneficiaries those who have awareness after nomination. In such away, 11,200 stoves are distributed in the kebeles of ten rural woredas and stoves in Bonga town which makes our performance more than 100%. This distribution of mirt stove was carried out with the presence of the woredas and zonal energy experts, woredas natural resource development experts, DA's and rangers of the project, established stove distribution committees, kebele administration members and NABU coordination office. The mirt stove distribution data is observed in table 2.

Table 4 Woreda based stove distribution information

11	Tello	1000	1000	100
<b>Sum</b>		<b>10,000</b>	<b>11,200</b>	112

#### **4.7 Monitoring And Supervision Of Energy Saving Mirt Stove**

Monitoring and supervision of energy saving mirt stove after the distribution was given special attention among the beneficiaries by kebele administration bodies, stove distribution committee, DA's, rangers as well as the zone and woredas energy and natural resource development experts. So, these concerned bodies besides their regular supervision task have given backstopping support to the beneficiaries in assembling and utilization. The following figure indicates the monitoring and supervision of mirt stove.

Fig. 4 house to house supervision of stove utilization by rangers

#### **4.8 Mirt Stove Usage/Utilization**

The communities who have got the energy saving mirt stove were actively used for different purpose such as cooking wote, baking enjera and our traditional food ‘kocho’. The usage/utilization of this mirt stove is observed in the following figure.

Fig 5 practical utilization of stoves by beneficiaries

#### **5 Human And Institutional Capacity Development**

Communities in and around Kafa Coffee Biosphere Reserve identified to receive the wood saving mirt stoves so, the economic and the living standards of users through minimization of fuel wood consumption and high decrement of women and children work load in addition safe baking of enjera and cooking wote without smoke so high decrement of eye disease.

The producers have been changed to good entrepreneur also the department planned the enterprises in 10 woredas to enterprises other energy saving technology to be profitable and to transform to good entrepreneur.

## 6. Activity Achievement and budget utilization

As discussed above the original agreed plan of operation was to produce and distribute 10000 stoves within Kafa biosphere reserve. Through coordinated effort the department has achieved the production of 11200stoves that surpassed the original plan by 1200stoves. Beside to quantity achievement the department also has exerted its utmost effort to reach as many rural kebeles that are fairly located over the biosphere reserve to reach the knowledge of the technology to a wider population.

In terms of budget utilization, the project has devised a cost sharing mechanism with the beneficiaries in such a way that beneficiaries collected the stoves from central distribution location. This reduced extra cost incur for transportation of stoves has been shifted for the production of additional stoves.

Table 5 Summary of budget expenditure

S/N	Major activities	Unit	Financial plan	Financial accomplishment	% of utilization	Remark
<b>1</b>	<b>Energy saving</b>	<b>Eur</b>				
1.1	Introduction and dissemination of energy saving mirt stove	"	-	-	-	
1.1.1	Training and production materials to local producers	"	24,000	18,319.82	76.3	
1.1.2	Purchasing of energy saving mirt stoves	"	87,359.82	93,039	106.5	
1.1.3	Support and monitor stove production	"	3,605.899	3,605.899	100	
1.1.4	Stocktaking and database establishment on utilization	"	5,034.45	5,034.45	100	
	<b>Sum</b>		<b>120,000</b>	<b>120,000</b>		

## 6 Lesson learnt and Impacts captured

More than 11 small scale producers of energy efficient stoves have been established in 11 woredas, these producers had sold 11,200 'Mirt' stoves. More than 56,000 people have benefited from energy efficient stoves.

Woreda staffs and communities around kebeles improved their skill on energy saving mirt stoves production with how the stoves minimizes the fuel wood consumption by 50% and how the technology decrease women and children work load. This also helped to work with peoples that in turn improved trust of communities. Presently mutual working relation has been built between forest user communities and government partnership with in the communities also initiated. Woman involvement knowledge has been seen acceptable and normal phenomena with in community discussion and mobilization.

## **7. Challenges encountered and measures taken during the implementation**

Some challenge that faced us in this project work and the respective measures that could be taken is summarized as follows:

Table 6 Major challenges and measures taken

S.No	Challenges encounter	Measures taken
I	Mirt Stove production materials such as sand & cement supply problem	Support given to link producers with suppliers
2	Distribution centers far from beneficiary	By extra awareness creation we made a help groups
3	Producers misuse of their money	Cooperative and other respective sector supports
4	Lagging of budget transfer	Negotiation to the head of local project coordinate
5	Stove distribution lagging	Discussion made with rangers and woreda water mines and energy office
6	Low motivation of the beneficiary for receiving the stoves	Awareness creation at different institutions
7	Size mismatch between local pan and the stove specially two woredas (cheta and tello)	Train was made for traditional pan producer. as immediate solution users advised to adjust the stoves to fit their existing pan
8	Lack of road accessibility and community awareness to energy saving mirt stove in	Constructing the road and creating the awareness to the beneficiaries

---

	two woredas (tello woreda)
9	Shortcoming of mirt stove for other purpose rather than baking injera.
10	Lack of entrepreneur idea on mirt stove Creating the awareness on usage of and creation of other alternative job on alternative energy advanced technology to grouped enterprise

---

The total agreed budget for the accomplishment of this project activity is 120,000 Euro. However, all the transfer to our account has been made in Birr, that imposed variability due to exchange rate fluctuation(refer table 6). The overall transfer made to our account was 2,797,164.8 Birr.

Table 7 Summary of budget transfer from NABU to our account

s/n	Installment	Date in E.C	Transfer in EURO	Hard currency change	Transfer in Birr
1	First installment	29/07/03	24,000	22.51	540,379.20
